

“I have to be sure it does everything I say it will do and more...”

One clinician’s view on using KOMET USA’s ZR diamonds.

Compiled by STAN GOFF

KOMET USA

ZR Diamonds™

Unmatched in versatility and performance, ZR Diamonds™ are essential tools for dentists and lab technicians working with today’s range of high-strength ceramics. Originally engineered for recontouring zirconia, they are now also recommended for use on lithium disilicate restorations. Featuring diamond particles permanently bonded in an exceptionally dense, packed layer, the diamonds provide optimal results quickly and with minimal effort. The coarse-, medium- and fine-grit diamonds simplify working with high-strength ceramics such as zirconia and lithium disilicate. **888-566-3887** komet-usa.com

DR. SAM SIMOS
BOLINGBROOK, ILL.
PRACTICING SINCE 1991

not only practice, but instruct post-graduate courses on implant, comprehensive restorative and cosmetic dentistry through my Allstar Smiles Learning Center and client facility in Bolingbrook, Ill. (allstarsmiles.com) and throughout the country.

As one of 60 leading dentists nationwide who are part of the Dental Team Concepts & Catapult coterie, I promote awareness, communication and education within the dental profession, and I am constantly evaluating new products. I will only use or employ those products within my practice that live up to or exceed the manufacturer indications on the product performance. There are many products out there that simply do not live up to the manufacturer’s “hype.”

How long have you used this product?

I was first introduced to the KOMET ZR diamond about three years ago when asked to evaluate the ZR bur line, and I have been using it ever since.

What type of results have you seen since using the ZR Diamond?

I do a lot of comprehensive restorative dentistry in my practice, so in any one sitting I can do a range of procedures that require different bur kits to accommodate my needs. I need a bur line that is performance reliable, high quality, competitively priced and has a deep product line. KOMET satisfies all of my bur needs.

Why would you recommend this product to a colleague?

It’s easy to recommend KOMET based on the product attributes mentioned previously. Additionally, for me to recommend a product to a colleague, I have to be sure that it does everything I say it will do and more, and be confident that the company will stand behind and support their products 100 percent. You get that with KOMET ZR burs and the entire KOMET bur line. ●
